## Compart Press Release

DocBridge Delta check software for automatic document comparison soon available in German

January 15, 2013

**[Böblingen, January 15, 2013] – DocBridge Delta for automatic document comparison soon available in German – demand growing in Europe and North America**

DocBridge Delta, the platform-independent software for automatic document comparison will be available in German starting in 2013. By expanding the program, originally available only in English, Compart is responding to the increasing demand in Europe. DocBridge Delta has enjoyed years of success in North America, including at Naehas and Japs-Olson, and the trend is growing. But the demand for DocBridge Delta is also on the rise in the German-speaking world, as well as in Western and Southern Europe. Projects in Germany are currently underway at the Federal Employment Office, the Broadcast License Fee Collection Agency (GEZ) and the Bertelsmann affiliate, arvato direct services Gütersloh GmbH. Compart anticipates that the new language version will have even more companies choosing DocBridge Delta to meet their needs. In the German-speaking countries in particular Compart sees tremendous market potential.

### **Document diversity is growing, along with quality requirements**

DocBridge Delta is aimed primarily at industries with a traditionally high document volume, such as banks, insurers, utilities, telecommunications providers and public administrations. Here there is a demand for easy-to-use tools to compare documents with slightly different content or layout changes. Quality assurance in document checking is essential, last but not least to ensure that unwanted changes do not result from updates to the document creation software. More efficient methods of checking are sought that can be integrated, if possible, into the entire document creation process. Thomas Funke, Vice President Product Management, at Compart: "Reliable and efficient document comparison is growing in

importance in production environments where reducing the misprint rate due to incorrectly implemented changes or out-of-date applications is the key. With DocBridge Delta, we provide companies with a tool that automates the check process with that very goal in mind, and makes it more reliable."

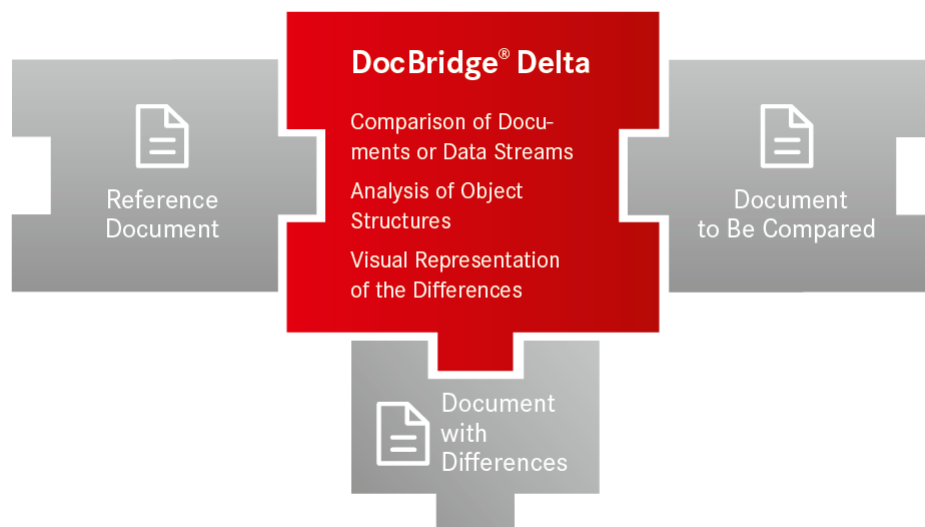

### **Comfortable graphical user interface simplifies configuration**

DocBridge Delta electronically detects and analyses differences between individual documents, visualizing them simultaneously. Objects coded in the files are analyzed down to the last detail structure and differences are displayed object by object. Certain areas can be excluded from the comparison, like the variable address field.

For the visual comparison, the documents to be compared are first converted into pixel images of equal resolution before the comparison takes place. Matching pixels are gray, a pixel that occurs only in the reference document is green and its counterpart in the comparison file is red. This makes it easy to see even the tiniest differences in objects.

The software is easy to use and simplifies configuration for the user. He or she can define the individual check criteria using drag & drop and view the detailed results as a PDF. This allows even users without extensive programming knowledge to configure customized workflows. Command-line programming is also available.

With DocBridge Delta, Compart provides companies with a tool that automates the check process with that very goal in mind, and makes it more reliable."

## Background information on Compart

Compart is an international supplier of output management solutions with subsidiaries in Europe and North America. The company is headquartered in Böblingen, Germany, in the Stuttgart metropolitan area. The scalable and platform-independent DocBridge family of products, among the most effective software solutions in the field of output management, enables high-performance processing of data streams and documents from different sources in large quantities. These data streams and documents can be output over all physical and digital output channels in accordance with company requirements.

Solutions include those for document optimization and conversion, modification and display, as well as comparison of documents with the same content but in different formats. The DocBridge series puts companies of every size in a position to communicate with their customers over the channel of their choice, on time and with excellent quality. Compart solutions help you gain greater efficiency in your overall operations.

Compart is represented in over 1,000 projects in 42 countries. Its core industries include finance (banking and insurance companies), utilities, telecommunications, retail, print providers and healthcare. Compart is considered a driver of innovation in the industry.
