

## Agile team seeking a Java Software Developer (m/f)

Thanks to our software solutions, services and innovative, world-class technologies, we at Compart are a leading provider in the area of multi-channel document management. Our customers can process, distribute and access documents and content of all types and formats in any system or channel.

### What Awaits You:

You independently contribute to new and further developments for advanced products in a scrum team. You work daily with state-of-the-art technologies and have plenty of room to implement creativity and your own solution approaches within the team. You take part in the entire software development process – from analysis and implementation, all the way to technical documentation and (unit) testing. Development is carried out according to principles such as clean code, test driven and continuous integration.

### What You Bring to the Table:

You have a degree in computer science or similar qualifications and have had relevant hands-on experience in software development with Java. You also have extensive skills in the application of current Java frameworks (including OSGi, EMF, JMS, JPA) and ideally have experience with agile software development processes. You are characterized by a strong willingness to learn and an interest in current software technologies.

### What We Offer:

- |   |   |   |
|---|---|---|
|  Lived values such as integrity, trust and respect          |  Creative opportunities for individual development |  Flat hierarchies and quick decision-making approaches |
|  Advanced training sessions, in-house language courses      |  Flexible work times, trust-based working time     |  Employee parking spaces free of charge                |
|  Fruit and beverages free of charge and a company cafeteria |  Company sports and health and wellness programs   |  Company parties and employee events                   |
