

DocBridge[®] View

Displaying All Documents and Data Streams – Independent of the Format

Functions

- Quick viewer
- All formats
- Can be integrated into own applications

Benefits

- One user interface for all documents and formats
- Display of meta-information
- Highly configurable

Large companies have a large variety of specialist applications and document types. A customer file can consist of many files of different formats. Software is therefore required which gives the user a standard view of the different document formats. In an ideal case, you would only need one program to display all document and data stream formats. **The ideal case is DocBridge View.**

What is DocBridge View?

DocBridge View is a program which is quick and easy to use and displays electronically saved or archived documents. It can display single documents, a series or documents collected together as a batch. An excellent feature is the support of all common file formats used for printing, filing and archiving. Each opened file is displayed in its own view but in the same display window. The loaded files can also be in different formats.

The format of the file is completely transparent for the user and is therefore irrelevant. As DocBridge View is based on the tried and tested DocBridge CORE Engine, all input formats in the Compart Matrix are supported. In all of these file formats, the user will always have a standard view which is always the same.

The DocBridge View Concept

For the display of documents all resource references are supported. For instance, it does not matter whether a font is included in the display document itself or merely a reference to an external font file, DocBridge View is able to display the file in highly accurate detail. The display on the screen is exactly the same as the printed or archived document. The usual internal and external resources used for the mixed-object formats and AFP, such as overlays, page segments, medium maps and form definitions or fonts are resolved accurately.

When displaying the font, an option has been provided to switch between the representation using similar system fonts and those fonts rasterized by DocBridge View itself. Forms missing in the data stream can be integrated for display and printing. This will further increase legibility and accuracy of the representational accuracy. Pages can also be stamped with additional text such as "Copy" or "Reprint" before they are printed.

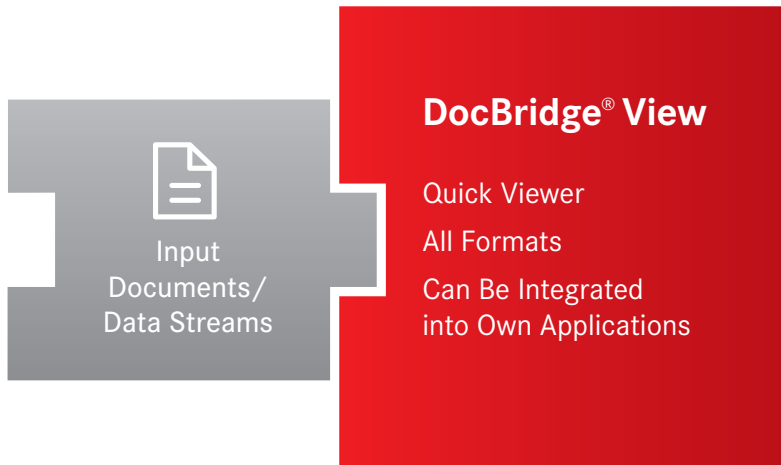

In addition to the actual document view, meta-information for the documents is also displayed. For instance, this includes printing information

such as simplex / duplex printing, the number of copies to be printed or information about the entry tray of the printer from which the paper will be taken. The values of NOPs or TLEs will also be displayed for the AFP format.

Finally, DocBridge View also offers further easy operating and display options. The pages of a document can be displayed in a hierarchical tree structure for navigation or as a miniature display. The user can navigate within the index structure for the display of AFP documents, for example in a TLE field containing the customer number. Individual pages of a document can be selected and printed or sent by email.

The DocBridge View display module is also available as a program library. The display of documents in the supported formats can therefore be embedded into existing specialist applications.

Universal Document Viewer

Voice of the Customer

„DocBridge View offers a very good toolbox for seamlessly integrating the program into existing applications.“

„I am continually surprised at how many options DocBridge View offers.“

Angelika Hübscher, Handelsregister Berlin

„Compart is a specialist in optimizing data streams, and what is more, for all standard formats and output channels.“

*Stefan Unterbuchberger,
Versicherungskammer Bayern*

Application Scenario 1

The Aim

Employees need to be able to access documents in the archive to answer customer queries more quickly. A customer file contains letters to the customers in AFP format and the customer's incoming scanned post.

The Solution

DocBridge View gathers the documents from the archive. The parts of the file are simultaneously displayed in a hierarchical structure. The employee has a standardized view of the customer file and can see all of the documents, irrespective of the file format.

Resulting Benefits

- Integration of existing applications, systems and formats
- Rapid and expert responses to customer queries
- Central installation of the required software

Application Scenario 2

The Aim

It should be possible to display all document formats available in the company simply and efficiently in a program.

The Solution

DocBridge View is able to display all common document and data stream formats from one interface. Individual pages are displayed clearly in a tree structure.

Resulting Benefits

- Standard user display - an interface for all documents and formats
- No additional software required
- Can be integrated as a program library in custom applications

Supported Formats

- PDF
- AFP
- Metacode
- LCDS
- PCL
- PostScript
- SAP
- PPML
- VIPP
- VPS
- Linemode
- Prescribe
- XPS
- XSL-FO
- Raster
- SVG

Why Compart?

In enterprise document and output management, Compart delivers one of the most comprehensive solution offerings in the world.

Compart develops all its core technology natively, ensuring operational reliability and single source accountability.

Over the course of more than 2 decades, Compart has developed comprehensive expertise to help our 1,400 customers throughout the world find the most efficient solution for their output management requirements.

Compart®

Document & Content Technology Solutions

About Compart

Compart is a leading global provider of Multi-Channel Document Management Solutions. Headquartered in Germany, with subsidiaries throughout Europe and America and served by a partner network in Latin America, for over two decades Compart has consistently helped businesses improve operational efficiency with fast and flexible processing of high-volume data and document flow.

Compart's scalable and platform-independent DocBridge® software - designed, built and supported by Compart - delivers bespoke output, on paper or digitally, anytime and anywhere they are required.

Compart is recognized as an industry leader in driving innovation and delivering world class solutions. With in excess of 1,400 clients in over 45 countries across the banking, insurance, retail, print services, utilities and telecommunications industries, Compart is also chosen as an exclusive technology provider by leading vendors in the industry.
